                                                                                                                                                                 The invention relates to a recombinant DNA construct comprising a CC promoter functional in a plant cell, where the promoter is positioned to CC provide for expression of a polynucleotide encoding a polypeptide from a CC microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant to the combinant DNA construct and growing the transformed plant, where the CC recombinant DNA construct is useful for improving plant with the CC recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plant, where the CC improved plant properties, e.g. improved cold, heat or drought tolerance, CC increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, pathogens or pests, content, improved yield by modification of carbohydrate, nitrogen or CC content, improved yield by modification of carbohydrate, nitrogen or CC providing improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan CC growth intended specification or improved galactomannan CC growth intended specification but was obtained in electronic CC form part of the printed specification but was obtained in electronic CC format from USPTO at segdata.uspto.gov/sequence.html.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
The invention relates to a recombinant DNA construct comprising a compromer functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant the recombinant DNA construct and growing the transformed plant with the recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for producing plant properties. The recombinant DNA construct is useful for producing plant properties tolerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        nitrogen;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
 New DNA sequence encoding polyketide synthase, useful for the production
                                                                                                                                                                                                                                                                                                                                                                                                                                   S. cinnamonensis MonAIV/polyketide synthase multi-enzyme MONS4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 621 AA;

of polyketides such as antibiotic monensin

CC cluster (and is capable of expressing a corresponding polypeptide), a condition probe derived from the gene cluster (for identification and condition of the same or analogous gene cluster, e.g. one which binds specifically to a region of the monensin gene cluster selected from mon condition and condition a The invention relates to a DNA sequence which is a fully defined sequence of 103551 base pairs appearing as ABX04971, or its variant, that it is not a sequence encoding all or part amino acids 1-920 encoded by mon AI as given in the specification. The DNA is the S. cinnamonensis polyketide antibiotic momensin biosynthetic gene cluster. Also included are a recombinant cloning or expression vector comprising the gene cluster, a transformed host cell which has been transformed to contain the gene Sequence 4038 AA; monensin gene cluster

## RESULT 14 AAB26917

S

AAB26917 standard; protein; 853

#### SXAXEXBXBXXXX AAB26917;

12-JAN-2001 (first entry)

Large subunit of periplasmic nitrate reductase NapA

NapA; toxic periplasmic nitrate reductase; enzyme; transgenic organism; waste denitrification; denitrifying bacteria. denitrifying bacteria.

Pseudomonas sp.

This sequence is the large subunit of periplasmic nitrate reductase. The NapA gene can be used to create transgenic organisms that can dentirify toxic waste. In addition, the present sequence may be used to produce probes and primers for identification of new denitrifying bacteria. Residues 20 to 853 of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the general of the present sequence are encoded by the gener

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      subunits. Also included are a chimaeric gene comprising the Nap nucleic acid linked to regulatory sequences, a transformed cell comprising the chimaeric gene and a nucleic acid fragment encoding an enzymatically active bacterial periphaemic nitrate reductase subunit, obtained by probing a library with the Nap nucleic acid and sequencing the isolated clone. The Nap nucleic acid is useful for producing enzymes useful in denitrifying reactions (for water purification and industrial waste purifying) and for identifying other denitrifying bacteria. Also disclosed are the nucleic acid and protein sequences for the nitric oxide reductase subunit genes NorB, NorC, NorQ and NorD. The present sequence represents the NapA protein. Note: The present sequence is stated to be encoded by the DNA appearing as ACD26043 but is not encoded by it.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score
